Marianna Gurovich  
Oracle Canada  
Toronto, Ontario

Dear Marianna Gurovich,

As I finish my Master's degree in applied mathematics, I am currently searching for a suitable position. I feel I would be a strong candidate for the **Course Developer** position at Oracle Canada.

In terms of experience, I have been an educator in formal classroom and informal tutoring settings. I have been a teaching assistant in four different courses at two universities. Being an assistant in these courses has given me an opportunity to prepare and lead tutorials in mathematics and physics. As a teaching assistant at Trent in a Physics for Teacher Education course has also given me training in a hands-on classroom environment, as this was a lab-based physics course for primary education students. At Western, my teaching assignments were engineering math courses, where I lead tutorials, taking questions and preparing solutions for homework problems for first and second year engineering students. Being a teaching assistant at both institutions also gave me experience in course planning and curricula development, as I worked directly with professors teaching university-level courses.

In addition to formal classroom experience, I have also tutored independently, primarily high school and university-level math. I am currently tutoring two grade eleven “university”-level students, covering topics such as exponent laws, compound interest, and functions. I am more than comfortable in my understanding of such topics, as well as communicating important ideas in ways that are flexible and accessible to different learning styles.

I feel with these attributes, I am a competitive candidate for the role of curriculum and course developer. Thank you for your consideration.

Sincerely,

Josh Grant
