

Joshua Grant

*"A mathematician is a machine for turning coffee into theorems." –
Alfréd Rényi*

Education

- 2007–2009 **MSc - Applied Mathematics**, *The University of Western Ontario*, London, Ontario.
Research area: Mathematical Biology
- 2003–2007 **BSc - Mathematics**, *Trent University*, Peterborough, Ontario.
Dean's Honour List, 2003–2007

Relevant Experience

- October 2023–October 2025 **Senior Software Engineer in Test**, *ContactMonkey*, Toronto, Canada.
As a senior software engineer in test, I was responsible for establishing end-to-end test automation as well as building quality engineering overall in a growing engineering organization.
- October 2022–May 2023 **Developer Advocate**, *Code Intelligence*, Bonn/Remote, Germany/Canada.
As a developer advocate at an early-stage startup, I focused on content engineering. This included written and video content based on fuzzers generally and Code Intelligence's main product CIFuzz in particular.
- March 2018–August 2022 **Solution Architect**, *Sauce Labs*, San Francisco/Remote, USA/Canada.
In this customer-facing role, I provided post-sale technical guidance and advice to enterprise customers working with Sauce Labs. This included developing best practices for Sauce products, troubleshooting test automation issues and demoing new and existing features to existing customers.
- April 2017–February 2018 **Test Developer**, *JUICE Mobile*, Toronto, Ontario.
I worked with a programmatic ad platform, primarily developing a service-level or API test framework in Python. I worked on a team of 10 developers as an "embedded" test development specialist.
- October 2010–October 2016 **Test Developer**, *CaseWare International*, Toronto, Ontario.
I worked primarily with the CaseWare Time product. I wrote and maintained automated regression and acceptance tests, emphasizing maintainability in my test code. This included working with Java-based Selenium tests for Time on the Go, Time's web-based version and SilkTest suites for Time, the primary desktop product.

What I'm Looking For:

- o Python: for web development, data science, and more, I've been working with Python professionally for 8+ years
- o Scientific Computing: Having some background in applied mathematics, I would like to work with scientific software and programming
- o Web APIs: I've tested them, I'd love to build them

Tools I Love

- o Python, for web development and general programming
- o Visual Studio Code: writing code and prose in several languages, including HTML, C++ and Python
- o Claude Code: For analyzing large codebases, generating tests, and working through my thought processes

29 Symons St – Toronto, Ontario M8V 1T7

📞 Mobile: (647) 240-0961 ■ ✉ <https://joshgrant.online>

- o Taking short walks along the lake, for excellent debugging

Tools I've Used

- o NumPy, for working with numerical methods in science and mathematics
- o Visual Studio, a powerful IDE for working with .NET including Visual C++
- o Git, distributed version control for everyone
- o Claude, Linear, and MCP: Create and manage tickets and projects, right from your command line.

What I've Done, in Chronological Order

- o Built and maintained Theorems as a Service, an API-first application in Python.
- o Built and maintained a medium-large Java-based test framework for a project management web application of approximately 1000 tests. This framework used Selenium with TestNG and achieved partial parallelization.
- o Built an API test framework for a programmatic ad platform product using Python. This tested the API layer of the internal application using approximately 200 tests with Pytest and requests.
- o Wrote a C++ simulation of cooperation dynamics as part of my Master's thesis work.

Interests

- Food I enjoy eating and cooking food of all kinds. Currently living in Toronto which an excellent food city overall.
- Art Current interests include work by Agnes Martin, Josef Albers and modernist abstraction.
- Being Online I am quite active on social media, including Mastodon mastodon.social/@joshin4colours
